PROFILE

Fourth-year engineering student at ESIEA majoring in cybersecurity, in my fourth year as an apprentice on Ecritel's network team. I build Stormshield firewall clusters with disaster recovery for hosted clients and run the related migrations. Building a hybrid tech and business profile, focused on AI automation and product strategy.

PROFESSIONAL EXPERIENCE

Network & Security Apprentice 2023 – Present
Ecritel – Cloud hosting & managed services provider Nantes, France

- Build **Stormshield firewall clusters with disaster recovery** as a core part of my role: full setup for new clients, from VM environment to flow rules, DNS, access control, **BGP routing**, high availability and monitoring.
- Redesign infrastructure for existing clients, including **migrations** from shared firewalls to dedicated clusters, coordinating with the systems team on virtual machine migration.
- Configure and maintain switches, routers and firewalls (Stormshield, Fortinet, Cisco) for hosted clients.

EDUCATION

ESIEA – Graduate School of Engineering 2025 – 2028 (expected)
Master of Engineering (Diplôme d'Ingénieur), Cybersecurity, work-study Laval, France

IUT La Roche-sur-Yon – Nantes Université 2022 – 2025
Bachelor of Technology (BUT) in Networks & Telecommunications, Cybersecurity track La Roche-sur-Yon, France

French Baccalaureate (General track) 2022
Majors: Mathematics, Computer Science – Advanced Mathematics option

ACADEMIC PROJECTS

Cyber-Awareness Escape Game – ESIEA 2025 – 2026
Team of 8, for middle-school students 6–8 months

- Co-designed an escape game teaching students about online dangers, built around workshops on **phishing**, **passwords**, **fake news** and **cyberbullying**, then ran it in middle schools.
- Led the phishing and cyberbullying workshops and coordinated with partner schools.

Privileged Access Bastion – Research & Innovation Project 2025 · 100 hours
IUT La Roche-sur-Yon – client: IT department, City of La Roche-sur-Yon

- Designed, deployed and benchmarked an administration bastion; led the project, wrote installation and user guides, and presented results to the client and faculty.

PERSONAL PROJECTS

Built with AI-assisted development (Claude Code), from idea to deployment.

- **Portfolio:** 3D portfolio built as a Blender-modelled building explored on scroll (Next.js, Three.js, Cloudflare Pages).
- **Codex:** personal tracker for films, series, anime, manga and games, with TMDB/AniList search and progress tracking (Next.js, Supabase, installable app).
- **Veille:** private daily news digest; an automated job reads 30 RSS feeds every morning and Claude groups and summarises the stories (GitHub Actions, Supabase, Claude API, about $0.40/month).
- **Map:** interactive map of my sites and the services behind them (vanilla JS, SVG, Three.js).

SKILLS & INTERESTS

Networking	Switches, routers, BGP, DNS, high availability, disaster recovery, network monitoring
Security	Stormshield, Fortinet & Cisco firewalls, bastion hosts, system hardening, Linux & Windows
AI & web	AI-assisted development (Claude Code), Next.js, Supabase, Three.js, GitHub Actions, Cloudflare
Tools	Microsoft Office, Adobe Premiere Pro, CapCut, Photoshop, Blender
Languages	French (native), English (intermediate – B1, technical and professional)
Interests	Travel and daily-life vlogs (Premiere Pro, CapCut); running and bodyweight training
